PROJECTS

Wi-Fi Strength Application

SEP 2020

An application that detects the signal strength of Wi-Fi using built-in sensors to calculate RSSI value and notify the user to find a good position to get a good signal strength. The Application reached 10K+ downloads in a very short span of time.

Morse Watch

OCT 2019

Morse code based two-way communication system with four user-accessible modes. The four modes are determined to provide speech to Morse vibrations and morse to speech conversion. The system enables short and long-distance communication between Disabled people and normal people or within themselves.

Farm Mechanization

JAN 2022

An application which helps the farmers to Lease and Rent Farm equipment. Technologies like Firebase Cloud, Flutter location modules and flutter notification modules were integrated to get a robust and real-time experience.
